

HOUSTON IAH AIRPORT · 96 SUITES

Housekeeping Operations App

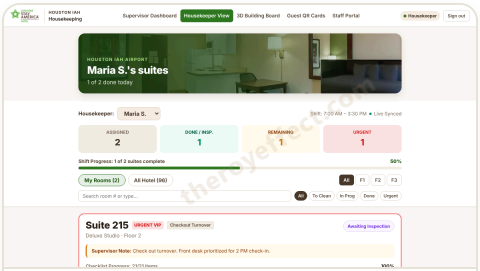

One live operational view for front desk, supervisors, housekeepers, and guests.

We built a cloud web app that replaces paper boards, physical master keys, and radio calls with **live suite and electronic lock status on the iPads and phones staff already use**. Supervisors dispatch suites and monitor floor readiness, housekeepers complete 21-point turnover checklists with deadbolt privacy detection, and guests unlock their doors with digital keys or request service from an in-suite QR card. Every action synchronizes instantly across all devices.

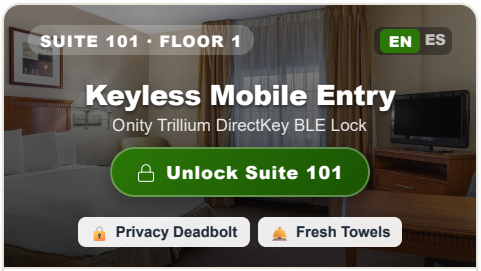

Front desk board

Live room readiness, urgent priorities, floor meters, and lock battery/DND status at a glance.

Housekeeper view

Assigned suites, 21-point checklist, turn/stay tags, and live deadbolt (DND) detection.

Keyless & guest page

Mobile BLE unlock with solenoid acoustic chime, privacy deadbolt sync, and service requests.

What it does

1. **Live room & lock status.** Dirty, cleaning in progress, awaiting inspection, clean, maintenance, and privacy deadbolt (DND) for every suite, synced in real time.
2. **Assign in bulk & workload.** Supervisors assign multiple suites to an attendant with priorities (urgent, high, standard) and balance housekeeping workloads live.
3. **Checklists and inspection.** A 21-item cleaning checklist with dual QA: housekeepers cannot self-approve; supervisors inspect and log photo-verified tickets.
4. **Keyless entry & lock health.** Secure BLE unlock matching commercial Onity Trillium mortise locks; staff monitors 4x AA battery pack voltage and signal RSSI.
5. **Guest requests by QR.** Each suite has a signed QR card. Guests unlock doors and request towels, cleaning, or DND with zero login or app download required.
6. **Reports & shift rosters.** Cleaning velocity, first-pass QA rates, attendant productivity, CSV export, and printable morning shift rosters for hotel managers.

Keyless Mobile Entry (BLE/RFID) · **iPad and phone** first · **English / Spanish** for staff and guests · **3D building board** by floor · **Onity Lock** hardware telemetry · **Role-based** staff sign-in · **Nothing to install,** runs in the browser
